

ACE ARM Training Agenda

1. Solving the ARM Problem – *Prerequisite for all other modules*

- Define the Application Resource Management (ARM) problem
- Show how Turbonomic solves the ARM problem

2. Understanding Your Environment

- Show how Turbonomic represents your whole environment in a Supply Chain
- Demonstrate how Turbonomic's actions solve the ARM problem, in the cloud or on-prem, with specific examples

3. Building the Abstraction

- Illustrate how adding more and different targets into Turbonomic builds a more robust Supply Chain
- Demonstrate how a more robust Supply Chain produces better analytics

4. Visualization and Context

- Learn how to create custom groups and application topology to provide context for visualization and policy

5. Taking Actions

- Understand action modes and automation settings and how to create your own automation policies

6. Prices and Shopping

- Understand how entities select the best placement
- Adjust pricing parameters to achieve desired business outcomes

7. Placement

- Learn all of the factors that influence actions and how to control them to achieve desired business outcomes

8. Scaling

- Understand the market heuristics behind scaling actions and learn how to control these actions for desired business outcomes

9. Planning

- Learn how to use plans to simulate a variety of "what-if" scenarios

10. User Management

- Learn how to create users, assign them roles, and integrate with Active Directory

11. Maintenance

- Learn how to maintain your Turbonomic instance, including licensing, upgrades, diagnostics, and data retention
