

Turbonomic 8/CWOM Management of Cloud Native Applications

Training Agenda

Topic	Description
The Cloud Native Journey	A successful transition to this organizational methodology requires the adoption of DevOps, the consumption of infrastructure and software as a service, the adoption of microservices, and developing the capability of continuous delivery. Each of these milestones are discussed
Container Orchestrators	The world of microservices and containers has resulted in an explosion of artifacts. Native command-line tools do not meet that need. Popular orchestrators for container management are discussed
Container Challenges	Even with popular and effective products on the market that manage your container deployment, there are critical aspects necessary to assure application performance that are not addressed
Turbonomic and Kubernetes Use Cases	Turbonomic integrates with any product which is upstream compliant with Kubernetes to provide our users with full stack visibility and control
Turbonomic and Cloud Foundry Use Cases	Turbonomic integrates with Cloud Foundry to provide full stack visibility and control
