

Remote ARM Training Agenda

Session 1

Solving the ARM Problem

This module is the foundation for all Turbonomic training and a prerequisite for other modules. In this module, you will be able to:

- Define the Application Resource Management (ARM) problem
- Show how Turbonomic solves the ARM problem

Understanding Your Environment

In this module, you will be able to:

- Show how Turbonomic represents your entire virtual environment in the Supply Chain
- Understand the types of actions Turbonomic will generate to assure the performance of your applications

Session 2

Information Sources

In this module, you will be able to:

- Add targets into Turbonomic
- Understand how each added target maps to layers of the IT stack
- Demonstrate how a more robust Supply Chain produces better analytics

Taking Actions

In this module, you will be able to:

- Understand action acceptance modes and other action settings
- Create your own automation policies

Planning

In this module, you will be able to:

- Learn how to run plans to simulate any kind of “what-if” scenario in your virtual environment
